

What is Universal Skid Steer Quick Attach?

Bobcat invented the Universal Skid Steer Quick Attach under the name Bob-Tach, and it has become the industry standard for skid steers and now even many tractor loaders. The universal skid steer quick attach system uses a plate on the back of an attachment, that has clearance for a 44" connector on the machine between two outside walls, and is tall enough to clear 18 1/2" tall. The universal skid steer quick attach uses two pins that protrude from the bottom of the machine side of the coupler to lock into two holes on the bottom wall of the plate that is connected to the attachment. These holes are approx. 4 1/2" wide, and are spaced approx. 31 5/8" center to center.
