

5. When mounting the third-function-kit, remove the caps from the connectors of mobile side and tractor side. Connect the connectors and the caps as shown in the follow figures.

- (1) Cap  
(2) Connector  
[A] Mobile side  
[B] Tractor side

6. Make sure that the mounting levers of both sides are at their **low** position as shown in the follow figures.

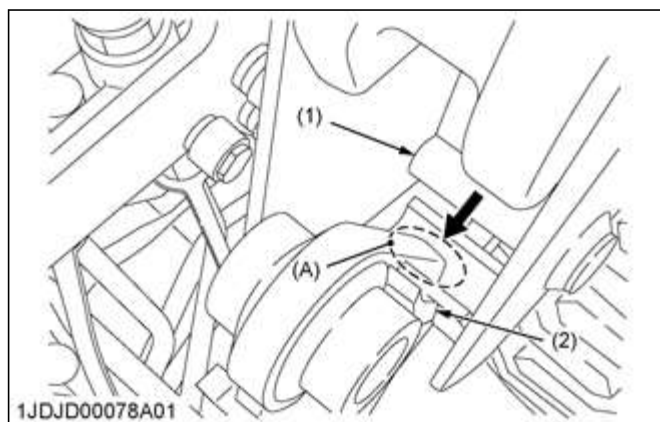

- (1) Mounting lever

7. Start the engine and run at the following speed.

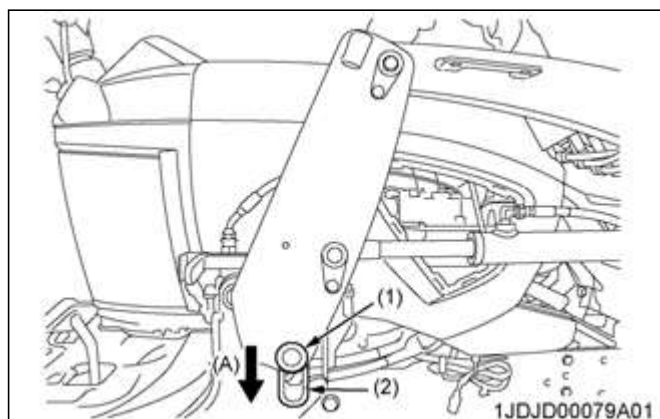

Engine speed	1800 rpm
--------------	----------

8. Slowly move the hydraulic-control-lever to the **up** position until the guide bosses of both side frames touch the main frames.

- (1) Guide boss of side frame (A) Touch  
(2) Main frame

9. Slowly move the hydraulic-control-lever to the **dump** position to lower the side frames into the main frames, and engage the bosses of the main frames to the guide bosses of the side frames.

- (1) Guide boss of side frame (A) Engage  
(2) Boss of main frame
