

Hydraulic Pump  
(Surface that  
Interfaces with the  
Engine Block.)  
I am calling this a  
gear. If you look  
closely you will note  
that it is not  
rectangular. It looks  
as though the pump  
froze at some point.  
This "gear" fits into a  
drive gear in the  
motor. It Caused  
dammage to that  
drive gear also.

This is a photo of the drive gear that drives the hydraulic pump. The damage is obvious.
